

LIQNET is a cryptocurrency exchange with the unique liquidity pooling technology

that aggregates liquidity from various platforms and solves the problem of the splitting of users and their requests and orders. LIQNET forms a unified order book with the best market depth and best prices for representatives of various jurisdictions

Our mission

The joint LIQNET exchange solves the problem of splitting liquidity in the market of cryptocurrencies. With the help of the LEN (Liquidity Exchange Network) mechanism, our platform collects and consolidates orders from different cryptoexchanges, forming a single order book with unified liquidity. This means that on LIQNET you can trade in large volumes and with greater profit than on individual exchanges.

Advantages of the project

Increased liquidity compared to individual exchanges

The best opportunities to close large deals, increase profits of traders

A single interface for trading on many exchanges

New prospects for the whole market, support of the industry

Special benefits in trading for holders of LEN tokens

Tools for scalping trading, market-making, etc.
A graph with a multitude of tools for technical analysis

Benefits of the token holders

The discount on the commission of the exchange is up to 90%, depending on the number of tokens spent on it

Access to the voting service to decide on a number of key issues, such as choosing trading pairs and ways to spend collected commissions

The opportunity for investors to enter the market of cryptocurrency exchanges and services through a ready-made thought through project

The potential growth of the market price of the LEN token

Terms of sale of tokens

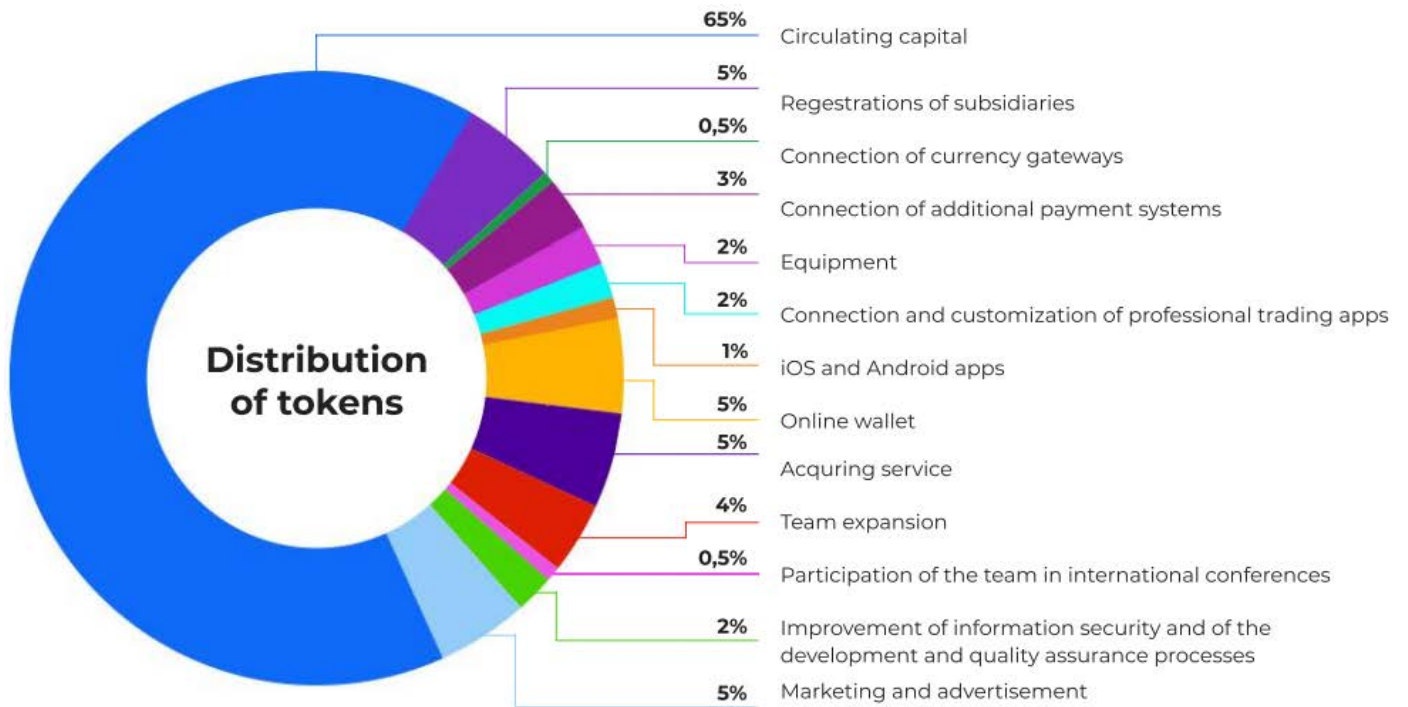

1 LEN = \$1

SOFT CAP

\$20 000 000

HARD CAP

\$50 000 000

ICO STRATEGY

The LIQNET project attracts investments by issuing its own LEN token and holding an Initial Coin Offering (ICO). The emission of the token is limited and has zero inflation, it complies with the popular ERC20 standard, and is emitted by a smart contract. Both contracts are limited emissioned and can work with other tokens, burning of tokens function is also included.

Total capital raising during ICO is up to 3 500 000 Usd. You can buy tokens by sending ETH to smart contract address published. Clients will get tokens to the address, where he had sent ETH from. Users can use tokens for any transactions right after purchasing.

LEN TOKEN DESCRIPTION

- Token ticker symbol: LEN
- Standard: ERC20
- Maximum tokens issued: 3 500 000
- Price of one LEN token: \$1
- Purchase options: Ether (ETH)

What LEN holders will get:

- Up to 50% of trading commissions used for buyback of tokens.
- Up to 5% of trading commissions will be sent to token holders for holding.
- Market capitalization of tokens in hold will decrease 100% of monthly commission for trading.
- Tokens can be used to pay 50% commission for trading. (For Example commission is 1\$, token can be exchanged to 0.5\$ trading commission).

BONUS

From 22 June till 21 July 2021 investors will get +15% bonus tokens. From 21 July till 20 August they will get +7.5% bonus tokens.

1% or more token holders will get service to vote on main actual decisions:

- Tokens and crypto-currencies being chosen for listing;
- Additional places for collecting liquidity and connecting to them;
- Specialized questions can be asked and discussed with holders of big portfolio of tokens (more than 1% of total tokens issued).

Road map

2018-2019 - Trading core, concept of Exchange, MVP is done (LEN technology works).

January 2019 - Website rebranding and update.

Q2 2019 - Public API launch.

Q3 2019 - High continuous loads testing.

2020 - Professional WEB Terminal development, ICO preparation.

Q2 2020 - Private API testing, Liquidity Provider service development.

Q2-Q3 2020 - Meta Trader 5 connection and connection to LIQNET platform.

Q3 2020 - Alpha test of Liquidity Provider Gateway.

Q4 2020 - Meta Trader 5 connected to Liqnet.

Q4 2020 - First 10 connectors written to main exchanges (not all of them work at the moment).

Reason - lack of working capital

November 2020 - Digital security audit done.

December 2020 - LEN technology starts working, first 3 connectors start working on it.

January 2021 - LEN to DEX & DeFi Bridge development.

March 2021 - Alfa test stat of LEN to DEX & DeFi Bridge. 2 LEN DEX Connectors applied.

Q3 2021 - 5 exchanges adding to LEN functioning.

Q3 2021 - Applying to Master Card, Visa and Union Pay to be able to receive fiat money. Pay Pal and other aggregators negotiations start.

Q3-Q4 2021 - Online wallet, connected to investor cabinet. Functions: receiving, storing, withdrawing funds, automatic conversion.

Q4 2021 - Android and iOS trading applications development.

Q4 2021 - Private API & Liquidity Provider Gateway launch.

Q1 2022 - Internet acquiring launch. Connecting to automatic exchange to crypto currencies listed on Liqnet.

Q1 2022 - ExchangeAsA_Service launch – providing crypto exchange with liquidity on it for 3-rd part users. Basically you can rent an exchange.

Q2 2022 - Trading acquiring launch.

Q2 2022 - Marginal trading providing. Futures trading launch.

Q2 2022 - CEX & DeFi crypto stacking launch. Integrating it into online wallet. (We start to publicly offer % loans to increase our working capital).

Q2 2022 - ICO/IEO/IDO/etc trading platform launch to trade tokens.

Q3 2022 - 15-25 more exchanges connecting to LEN.

Q3 2022 - Additional trading terminals development.

Q3 2022 - Adding standard API connectors to give opportunity for typical trading crypto trading engines for connecting to LiquidityProviderGateway.

Q4 2022 - LEN to DEX & DeFi Bridge connectors to 5-10 most popular DEX sources.
